1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 are, drawn to a filter, classified in class 708, subclass 5.
- II. Claims 9-11 are, drawn to a digital to analog converter, classified in class 341, subclass 144+.

2. The inventions are distinct, each from the other because:

Each group of claims is directed to a separate invention. It is noted that the groups maybe belong to a system.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because subcombination is not essential to combination. The subcombination has separate utility such as a digital to analog converter.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2193

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
